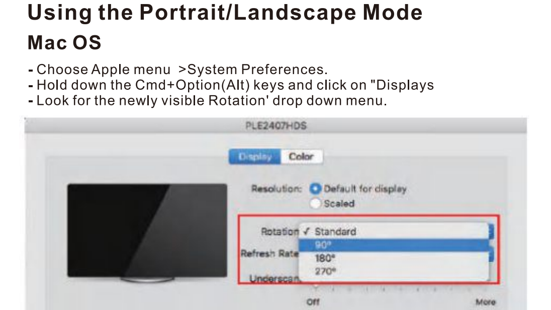
Using the Portrait/Landscape Mode

Mac OS

- Choose Apple menu >System Preferences.
- Hold down the Cmd+Option(Alt) keys and click on "Displays
- Look for the newly visible Rotation' drop down menu.



Compatible Devices

3. Connecting a Type-C device
Connect each end of the Type-C to Type-C cable to a display and a third-party device such as a Mac Book, smartphones, etc. to achieve a one-cable direct connection.
Note: This display only supports devices with a full-featured Type-C (USB 3.1) port. Some Type-C devices have Type-C ports for charging only and cannot support video and audio signal transmission. Therefore, if your device does not have a full-featured Type-C port, it may not be recognized by the display when connected.

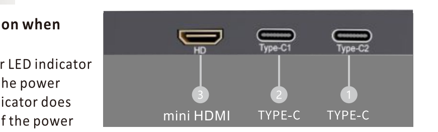
4. Connecting headphones
This monitor comes with a 3.5mm audio output jack, which allows you to connect third-party audio devices to the monitor, such as headphones, Audio, etc.

Compatible Devices

Common Problems and Solutions

Please read and keep this instruction manual carefully, if you have any questions, please follow the product instructions operate this product.

Problem and solution



1. Display does not turn on when the power is connected
Please check if the monitor LED indicator lights up, red light means the power supply is normal. If the indicator does not light up, please check if the power supply is connected correctly or replace the power cord/power adapter to re-connect.

2. Display comes to sleep mode after connecting the power supply
Please check whether the power supply can provide the voltage and current to meet the normal running of the monitor.

3. Display shows no signal
Please check the device connected is on; check whether the signal transmission cable (HDMI, Type-C) is connected properly; try to connect other devices or use other signal cables to connect the display.

4. No sound after connecting other devices
Please check whether the volume of your device is not turned on; please check whether the audio output device has been connected by other devices, such as headphones, or other speakers; please check whether your device needs to change the default audio output device.

5. Connected Type-C phone/laptop, but cannot mirror the phone/laptop screen
Please check with your device manufacturer if the phone/laptop has a full-featured Type C interface. Since some mobile phone/laptop Type C interfaces are for charging only and cannot transmit audio/video signals, therefore it cannot compatible with this display.

6. Display screen flicking
Please check if both ends of the HD cable are connected properly. If it is, try to replace it with another HD cable to test the monitor; please check if there is any interference from other electronic devices near the monitor, or if the screen flicking is caused by insufficient power supply.
